

## Alan E. Heywood

### Nitric Acid Group

On December 24, 2020 Alan passed away after a long fight with cancer. Alan was the Director of PGM Recovery Systems for the Nitric Acid Group. He started with Sabin in 2004 serving in many different duties. Among Alan's accomplishments were several patents for various PGM processes. He also got our getter and gauze programs rolling. In 2014 Alan started training me in the construction of the getters. Through the years we had many conversations about cars, guns, and American politics. Each meeting ending with a good laugh. In 2017 I accompanied the Nitric Acid Group to Austin, Texas (below) for the ANNA Conference. Sabin Metal has lost a mentor and a friend. We at Sabin want to thank Alan's Family for sharing him with us, and offer our condolences. Happy Trails Mate.

### **Williston News**

As the summer temperatures rise, so do employees at Sabin Metal West to meet the challenge of growth at the plant. We are packed to the roof with product from companies around the world continue to pour into Williston, North Dakota.

SMW set a record year in 2019 for catalyst handled at SMW, came close in 2020 and is on a path to be near record or over again this year.

The kilns and sampling push hard to feed the furnaces. Sampling has split and extended its days to get customers their results and the kilns are running constantly to supply the samplers.

A third rotary kiln went online earlier this year to take some of the pressure off time constraints when waiting for catalyst to be cleaned up. The kiln has been running nearly constant since the operator turned the switch on, as are the other two kilns.

Both large electric arc furnaces just received their annual rebuild as workers got them ready for the 11 ½ months of task of 24/7 melting.

SMW is preparing for its second addition to the storage building. A 80'X150' cement slab will be poured soon to attach another area for storage. Completion of the building will depend on construction costs.

SMW first added a 80'X100' storage building in 2012 to house empty SA-Bins. It soon was repurposed to house customer catalyst bins and plans for an addition were made with an 80' X 200' addition, being completed in 2019.

Last but definitely not least, the employees. SMW is employing about 135 people now, compared to 75 a decade ago. The economy in an oil boom town like Williston sometimes makes difficult to find workers, but SMW has managed to hire and keep some quality workers.

### **SMC (Canada) Ltd. News**

As of June 01, 2021, Dan Cleroux, Vice-President and Manager has retired after 27 + years with the Sabin Corporation. A retirement luncheon is planned in the next week, so pictures will follow in the next Nugget. The Employee's of SMC (Canada) Ltd. all wish Dan a healthy & lengthy retirement with many years to enjoy his gardening and other hobbies. We hope he continues to drop by to share the fruits of his labor from his gardens.

Derek Croxall has been appointed Manager of SMC (Canada) Ltd. Derek has been with SMC since 1999 and looks forward to many years with the Sabin Corporation. Congratulations to both Dan & Derek.
